

Environmental Services

About

ABPmer's Environment Team consists of specialists in marine biology, ecology, environmental science, maritime archaeology, marine planning and policy.

Their professional knowledge is regularly applied to a range of studies for the coastal, energy, industry, ports and governance sectors including EIAs, ecological assessments and socio-economic evaluations.

In particular the team enjoys a wealth of experience of carrying out multi-disciplinary investigations into the environmental impact of proposed developments and the preparation of formal environmental statements.

Application

- appropriate assessment
- compensation and mitigation options
- ecological assessments
- environmental impact assessment (EIA)
- environmental monitoring programmes
- expert witness
- habitat creation
- habitat regulation assessment including appropriate assessments
- marine advice
- marine consents
- marine impacts and mitigation
- marine licensing
- marine policy
- marine risk analysis
- marine spatial planning
- policy research
- regulatory impact assessment
- socio-economic evaluations
- socio-economic impact assessment
- strategic environmental assessment (SEA)
- underwater noise assessment

ABPmer also provides such services to environmental consultants who seek specialist support to meet individual project requirements.

Where environmental assessments, audits or reviews require specialist inputs, our services can be tailored to strengthen the project team and provide the level of input most suited to the consultant's needs.
